# FIXSTA: Company Business Profile

## ABOUT

FIXSTA is a local South African company delivering alternative energy solutions to both the commercial and residential market. We currently use renewable energy to assist our clients to become self-efficient either through backup power or solar installations. In the near future we will be adding gas and we are now looking into wind. At FIXSTA our slogan is: *Solving everyday problems.*

## SERVICES

- 1a, FIXSTA can source all the equipment and deploy the desired system.
- 1b. Not recommended however if a client has already sourced their own equipment we will also assist in the installation (warranties on the equipment will then be handled by the client.)
2. When requested FIXSTA can deliver additional engineering reports/evaluation with any of our installation. If you need us to audit your installation we can do this too.
3. When requested and required FIXSTA offers COC's with all our installations.

## TEAM

We have professional teams located in Cape Town and Johannesburg. With qualified electricians and engineers as well as many years of experience in the industry; FIXSTA aims to deliver the most seamless experience.

Furthermore our teams will travel to provinces we do not yet have teams in yet and we are looking to add more teams soon.

## PRODUCTS

- FIXSTA comes networked with strong relationships between our manufacturers and suppliers. This is essential not only in keeping costs down but moreover to resolve any disputes that may arise.
- Systems we have supplied include: 2kw, 3kw, 5kw, 7,2kw, 8kw, 10kw, 12kw with the relevant solar panels, railings and fittings. Most of these installations are scalable/expandable. We have experience in both gel and lithium batteries.
- When possible (client budget dependent) we use COCT approved equipment.
